GTM STACK AUDIT · ANYREACH INC · 09 MAY 2026

Pitch versus *data.*

Two tools audited. Twelve findings. Four critical. The pattern across them is not complexity — it is drift between what Anyreach sells, what its CRM is measuring, and what its outbound is doing.

Audit by Anyreach Audit Engine v0.7.2 · for richard@anyreach.ai

FINDINGS	TACTICS	TOOLS AUDITED	AUDIT RUNTIME
12	12	02	30 min
4 critical · 5 high · 3 medium	Effort: 4 XS · 5 S · 3 M	Attio · Apollo	MCP-orchestrated · all-time data

Where the *gap* is.

Four critical findings, four different roots — but the same diagnosis. Each is independently fixable. Together they describe a GTM machine that is mostly off, and the parts that run, run on the wrong target.

F-001 CRITICAL

ICP drift

0/5 won deals are BPOs

The pitch is BPOs. The bookings are healthcare.

- 11 Apollo sequences · 0 target BPOs
- 50% of 146 deals tagged Low ICP fit
- Only 2.1% of deals source from the BPO channel
- 3 of 5 won deals are healthcare end-customers

F-002 CRITICAL

Apollo cannot send

0 linked email accounts

12 weeks of dormancy on a paid plan.

- 10 of 11 sequences active · all unable to send
- Single user owning sequences not present in CRM
- 9.6M AI · 59K lead · 58K dial credits at 0% used
- Last send: 16 February · 82 days ago

F-003 CRITICAL

No team in CRM

100% deals owned by CEO

One calendar caps every growth lever.

- 146 deals · 1 owner · gini 1.0
- 8 of 10 Attio seats suspended
- "demo@anyreach.ai" is the only other active seat
- Succession risk: any 2-week absence stalls every deal

F-004 CRITICAL

Pipeline math broken

<20% deals with deal value set

Forecasting is foreclosed until this is fixed.

- Status set on 6.2% · AI-type on 4.8%
- ARR set on ~15% · value on ~20%
- No structured loss-reason field exists
- A 2-hour Saturday unlocks every other analysis

Two systems, *one functioning.*

Attio is a populated database with low classification and one user. Apollo is a paid plan that cannot send mail. Each tool individually looks recoverable; together, the GTM stack delivers no compounding outcome.

CRM · PRODUCTION

NEEDS ATTENTION

Attio

Companies	46,191
People	111,116
Deals	146
Active users	2 of 10
% companies classified	0.8%
Owner concentration	100% (CEO)
Pipeline stages	17

Single-owner pipeline with 99.2% of companies unclassified. 17 stages, 5 of them duplicate scheduling states. Parallel pipeline tracked on companies object contradicts the deals object.

SALES ENGAGEMENT · PRODUCTION

CRITICAL

Apollo

Sequences active	10 of 11
Linked email accounts	0
Days since last send	82
AI credits used	0% of 9.6M
Lead credits used	0% of 59K
Aggregate bounce rate	9.2%
Reply rate	0.73%

Cannot send a single email today. Owner of all sequences does not exist in Attio — likely a former employee. 6.8% hard bounce rate has already damaged sender reputation.

The ledger of *twelve*.

Every finding, sorted by severity. Each links to evidence in the audit JSON, and to a tactic with a priority score and effort estimate.

F-001	● CRITICAL	ICP drift: stated BPO, actual healthcare	Attio + Apollo
F-002	● CRITICAL	Zero pipeline coverage from Apollo (0 inboxes)	Apollo
F-003	● CRITICAL	Single-owner pipeline · 100% on CEO	Attio
F-004	● CRITICAL	Pipeline math broken · >80% of deals lack value	Attio
F-005	● HIGH	Stage sprawl · 17 stages + parallel pipeline	Attio
F-006	● HIGH	EGS Global concentration · top revenue + top churn	Attio
F-007	● HIGH	46K-company graveyard · 99.2% unclassified	Attio
F-008	● HIGH	Zombie spend on Apollo · 0% credit utilization	Apollo
F-009	● HIGH	Deliverability failing · 6.8% hard bounce	Apollo
F-010	● MEDIUM	Stage/Status inconsistency on 3 churn deals	Attio
F-011	● MEDIUM	Prospects list 14 months stale	Attio
F-012	● MEDIUM	Loss/churn taxonomy missing	Attio

Decide in *30 days*.

The right posture is not to optimize this stack. It is to decide whether Anyreach is in founder-led-sales mode (turn the machinery off) or rebuilding a real sales motion (turn it on, properly). Three shifts, in order.

SHIFT 01

ICP align CRM, brand, outbound

COMPANIES TO TRIAGE
~5K of 46K

SEQUENCES TO REBUILD
all 11

Pick BPO or healthcare-services. Filter Attio to ~5K ICP-fit companies. Rebuild Apollo sequences for the chosen ICP. Verify the list before sending.

The hybrid state is the most expensive of the three options.

SHIFT 02

Hygiene write-once data asset

REQUIRED FIELDS
value · ARR · stage · source

STAGES TO COLLAPSE
17 → 6

Make value+ARR+stage+source required at deal creation. Add structured loss_reason and churn_reason. Delete the duplicate bpo_deals field on companies.

A few hours of work that unlocks every other analysis.

SHIFT 03

Apollo go or goes, this sprint

GO PATH
Inbox · domain · sequence

GOES PATH
Downgrade · cancel

Either link an inbox this week, transfer ownership, warm a fresh domain, ship one BPO sequence at <50/day — or downgrade and rely on advisors and inbound.

The third option (zombie spend) is not acceptable.

05 · TACTICS, RANKED

Twelve moves, ranked by *impact ÷ effort.*

Top 9 shown. The first five — T-001 through T-005 — are the 30-day execution slate. Three more (T-006 through T-008) ship in days 30–60. The full backlog is roughly 12 working days of focused effort.

1.	9.5	S	Decide Apollo's fate this sprint T-001	Apollo
2.	9.2	S	Make value/ARR/stage/source required at deal creation T-002	Attio
3.	9.0	M	Pick one ICP and align CRM, Apollo, brand T-003	Attio · Apollo
4.	8.5	S	Collapse Attio pipeline 17→6 · delete parallel pipeline T-004	Attio
5.	8.4	S	Reconcile EGS state · publish canonical retention number T-005	Attio
6.	8.0	M	Triage 46K companies · tag ~5K ICP · archive rest T-006	Attio
7.	7.8	XS	Add structured loss_reason / churn_reason picklists T-007	Attio
8.	7.5	M	Verify list, warm fresh domain, throttle volume T-008	Apollo · DNS
9.	7.0	S	Decide founder-led-sales vs first-AE-hire T-009	Attio · HR

What it costs to *not act*.

Each risk below is independently survivable. Together, they compound — and the compounding is what changes whether the next fundraise gets a clean diligence pass or a long set of follow-up emails.

Q1 **Investor narrative risk**

Saying "we have a sales motion" while the CRM shows 1 active user, 5 won deals in 14 months, and a broken Apollo will not survive diligence. Better to surface this voluntarily and frame the rebuild.

Q2 **Concentration risk**

EGS represents 47% of won ARR. Any further EGS deterioration drops Anyreach below $500K of clean won ARR. Two more advisor relationships in 90 days is the cheapest mitigation.

Q3 **Domain reputation risk**

A 6.8% hard bounce rate on existing sends has already damaged the sending domain. If outbound restarts on the same lists from the same domain, deliverability will collapse before any campaign matters.

Q4 **Hire-time risk**

When Anyreach hires its first AE, they will see 46K unclassified companies, 17 stages, all deals on the CEO, and a Prospects list 14 months stale. Their first 30 days will go to cleanup, not selling.

> THE CHEAPEST FIX
>
> The five sprint-1 tactics combined are `under 12 hours` of focused work and produce *a canonical retention number, a CRM that answers pipeline-coverage truthfully, an honest Apollo state, and a single named ICP* — together, the basis for a clean fundraise narrative.

30-DAY SLATE

5

Tactics that ship by 09 June

DECISION NEEDED

2

ICP commitment · Apollo go/goes

HOURS TO VALUE

~12

Sprint-1 tactics combined

The audit is not a *verdict*. It is a *checklist*.
